JWordWeb

Lightweight Rich Text Editor for the Web

JWordWeb is the web version of JWord component. JWordWeb is a small **JavaScript** library that talks with a JWord server over HTTP to provide a web based document processor. JWordWeb is as tiny as **50 KB** and yet as as powerful as JWord itself.

JWordWeb adds full document processing capabilities to your web projects. Documents including tables, pictures and equations can be easily composed and shared with this tool. Unlike many HTML editors JWordWeb does real paging and processes desktop formats (RTF, ODT) as well as HTML.

ONLINE DEMO
